I think that I got very lucky to have Maddie as my GSI because I don't think I would have done as well on mastery quizzes/assignments if she wasn't my GSI. She made the course feel very applicable and she showed up for students that I have not seen a lot from other GSIs or even professors. She was able to explain any concept and simplified it to match where I was at. As a student, this was very helpful because I never felt judged for not understanding. I think Maddie understands learning is a process, and the way she explains things both in our lab sections and OH have really helped me understand the content in STAT 2.

Maddie was a great GSI, she was very clear in her explanations and allowed us to ask clarifying questions. Expectations were clear and her office hours were very helpful.

The review portion at the beginning of class is done well and was really useful. I think writing on the blackboard was something I really appreciated, I feel like in other classes slides are good too but for math related courses I think using blackboard or whiteboard enhances my learning. I also liked that we were given time to try the problems and after we go over it together as a whole class.

This section was helpful for review of the topics we learn, since sometimes the course can go at a faster pace

Maddie. I don't like math, and I still don't, but Maddie made it much easier to enjoy labs, making my understanding deeper in a subject I would normally struggle massively in.

Very organized lecture at the beginning of the section. Maddie explained all concepts super well, and I learned a lot from her talking through problems.
